

ACCESS WITHOUT BORDERS

Cloud Services from Galaxy Control Systems

CLOUD CONCIERGE AT YOUR SERVICE

Cloud Concierge is a powerful suite of cloud-based computing services offered by Galaxy Control Systems. The suite provides real-time monitoring, management and control of your access control system from a convenient location on your PC, tablet, or even your mobile phone, with simple applications.

From access control, to monitoring or video, we have your business needs covered. Backed by a cloud infrastructure, our services live in the cloud where you can manage your business anywhere, at any time.

Cloud Concierge offers simple solutions for today and the future.

- Intuitive User Experience
- Easy to Install
- Customize for Integration
- Robust with High Availability
- Cost Effective
- Zero Maintenance

Led by a team of seasoned security executives and world-class engineers, Cloud Concierge is more than just a service. We are focused on developing a new breed of unified networked security products that combine the performance, sophistication and functionality of enterprise-class security systems into a compact and affordable package.

OUR SERVICES

ACCESS CONTROL

LaunchPoint™

Internet based access control built with simplicity in mind.

MOBILE APPS

PersonPoint™

Control employee access remotely with one-click of a button.

DoorPoint™

Manage your facility remotely with our DoorPoint app.

MONITORING

Monitored Access Control - Our team of professionals will keep your business safe by monitoring activities 24/7.

VIDEO

Discovery Apex - A video management web service for complete remote administration of your video.

Video Monitoring - Prevent unnecessary visits to the office because of false alarms or stop it from happening completely with LIVE video monitoring.

WHY MOVE TO THE CLOUD

Efficiency - Access to software from anywhere in the world. Simple to use on your PC, tablet, or mobile phone. Intuitive interface optimizes for your device and requires minimal training. Enables management of multiple properties and employees with access to multiple sites.

Cost Effective - Eliminate hardware, software and costly maintenance by only paying a subscription fee that covers all these costs and more.

Security - Laptops, desktops, and servers are eliminated with cloud services. Traditional on-premise hardware is susceptible to theft where cloud resources are locked away in secure data centers.

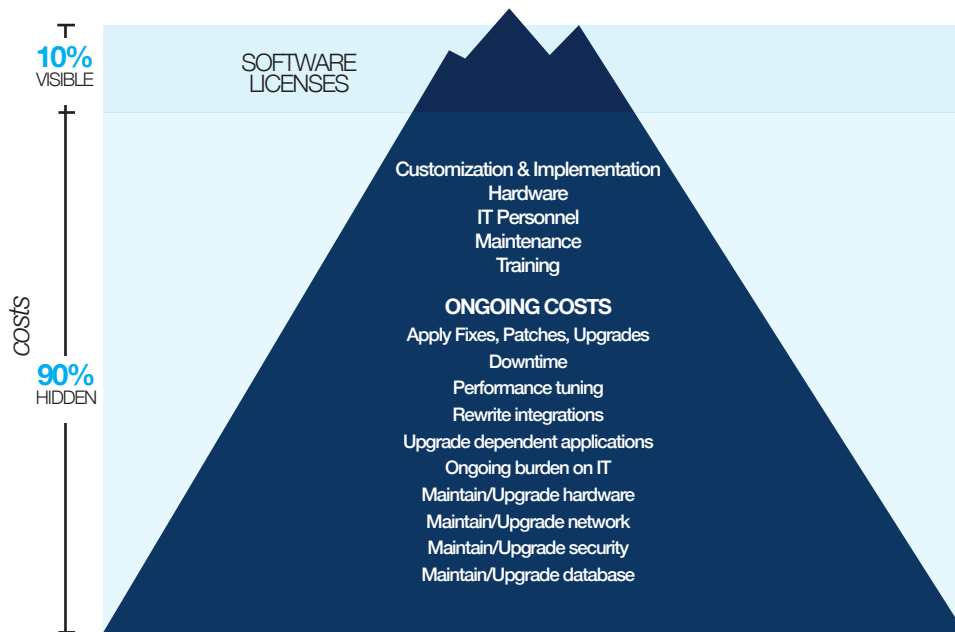

Updates - Cloud Concierge is completely transparent and takes care of every update so you never have to worry about maintaining your system. Your system will always be up-to-date.

Business Continuity - Data access and backups are vital to business continuity. The cost associated for a company to provide data redundancy is quite high and for some not an option. Cloud providers have a redundant framework built with this in mind so you have peace of mind.

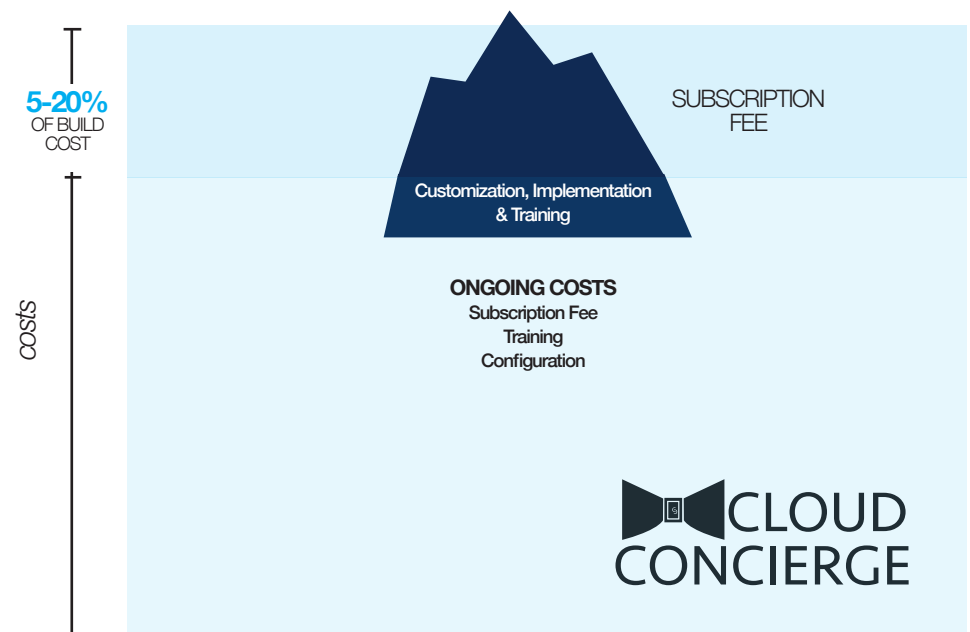

Employee Cost/Overhead - Staffing budgets are often the highest cost of expenses. Having a well qualified workforce can be a large part of the budget. Even when costs are not a concern, training staff to maintain another system puts a greater burden on the current staff. Cloud Concierge alleviates these costs and allows for more profitability with your staffing budget so you can get back to managing your business more effectively.

HOW SUITE IT IS

LAUNCHPOINT™ OVERVIEW

Internet based access control built with simplicity in mind. Wizard-driven menus allows for system management with minimal training. Responsive design allows access from anywhere in the world via a desktop, tablet or mobile phone.

FEATURES

Personnel - Users can search, enroll, and maintain cardholders as well as set access privileges.

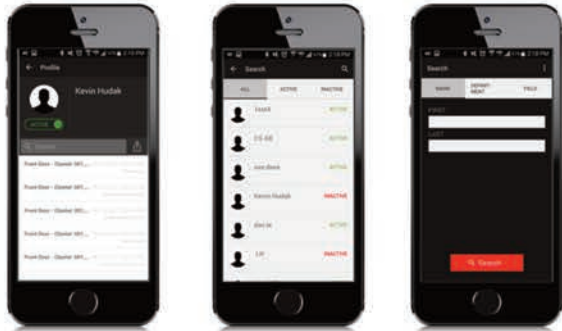

Door Control - Operators can pulse doors and override door lock and unlock schedules.

Reports - View and print Reader Activity reports and Personnel Directory reports with photos.

Access Groups - Define user permissions by adding or modifying access groups.

Time Schedules - Control door schedules or cardholder access by adding or modifying time schedules.

Holidays - Grant access to doors or users by adding or modifying holidays.

PERSONPOINT™ OVERVIEW

Control employee access with one-click of a button using our PersonPoint mobile app.

FEATURES

Cardholder Access - Cardholders and credentials can be enabled or revoked remotely.

Reports - Searchable cardholder activity can be audited and sent to email.

DOORPOINT™ OVERVIEW

Manage your facility with our DoorPoint app. Unlock/lock doors or lock down your entire facility with a push of a button.

FEATURES

Site Lockdown - During a crisis situation, managers can lock down part or an entire building with our mobile app.

Door Control - Users can control door or bypass schedules via the lock/unlock button. Use our DoorPoint app to lock or unlock doors remotely.

Reports - Searchable door activity can be audited and sent to email.

ANYWHERE ANYTIME

MONITORING OVERVIEW

Monitored Access Control - Allow our team of professionals to keep your business safe by monitoring your business. Our command center is staffed 24x7 and ready to respond.

Providing access to doors and areas works great when everyone follows the rules. What happens when they don't or when an intruder enters an unauthorized area? Will you even know with no one monitoring? Have our trained staff work with you and monitor your building 24x7. If there is a situation, we will contact you to further investigate.

VIDEO : DISCOVERY APEX OVERVIEW

A video management web service for complete remote administration of your video. Our hardware and software can be completely managed from any computer with access to the internet.

Features - Video is recorded and stored locally for remote access. This allows for always available video even if your internet is offline. High definition recording can also be used with little consideration for bandwidth. If a recording is needed, it can be uploaded into the cloud and shared via email. Shared video requires no logon credentials.

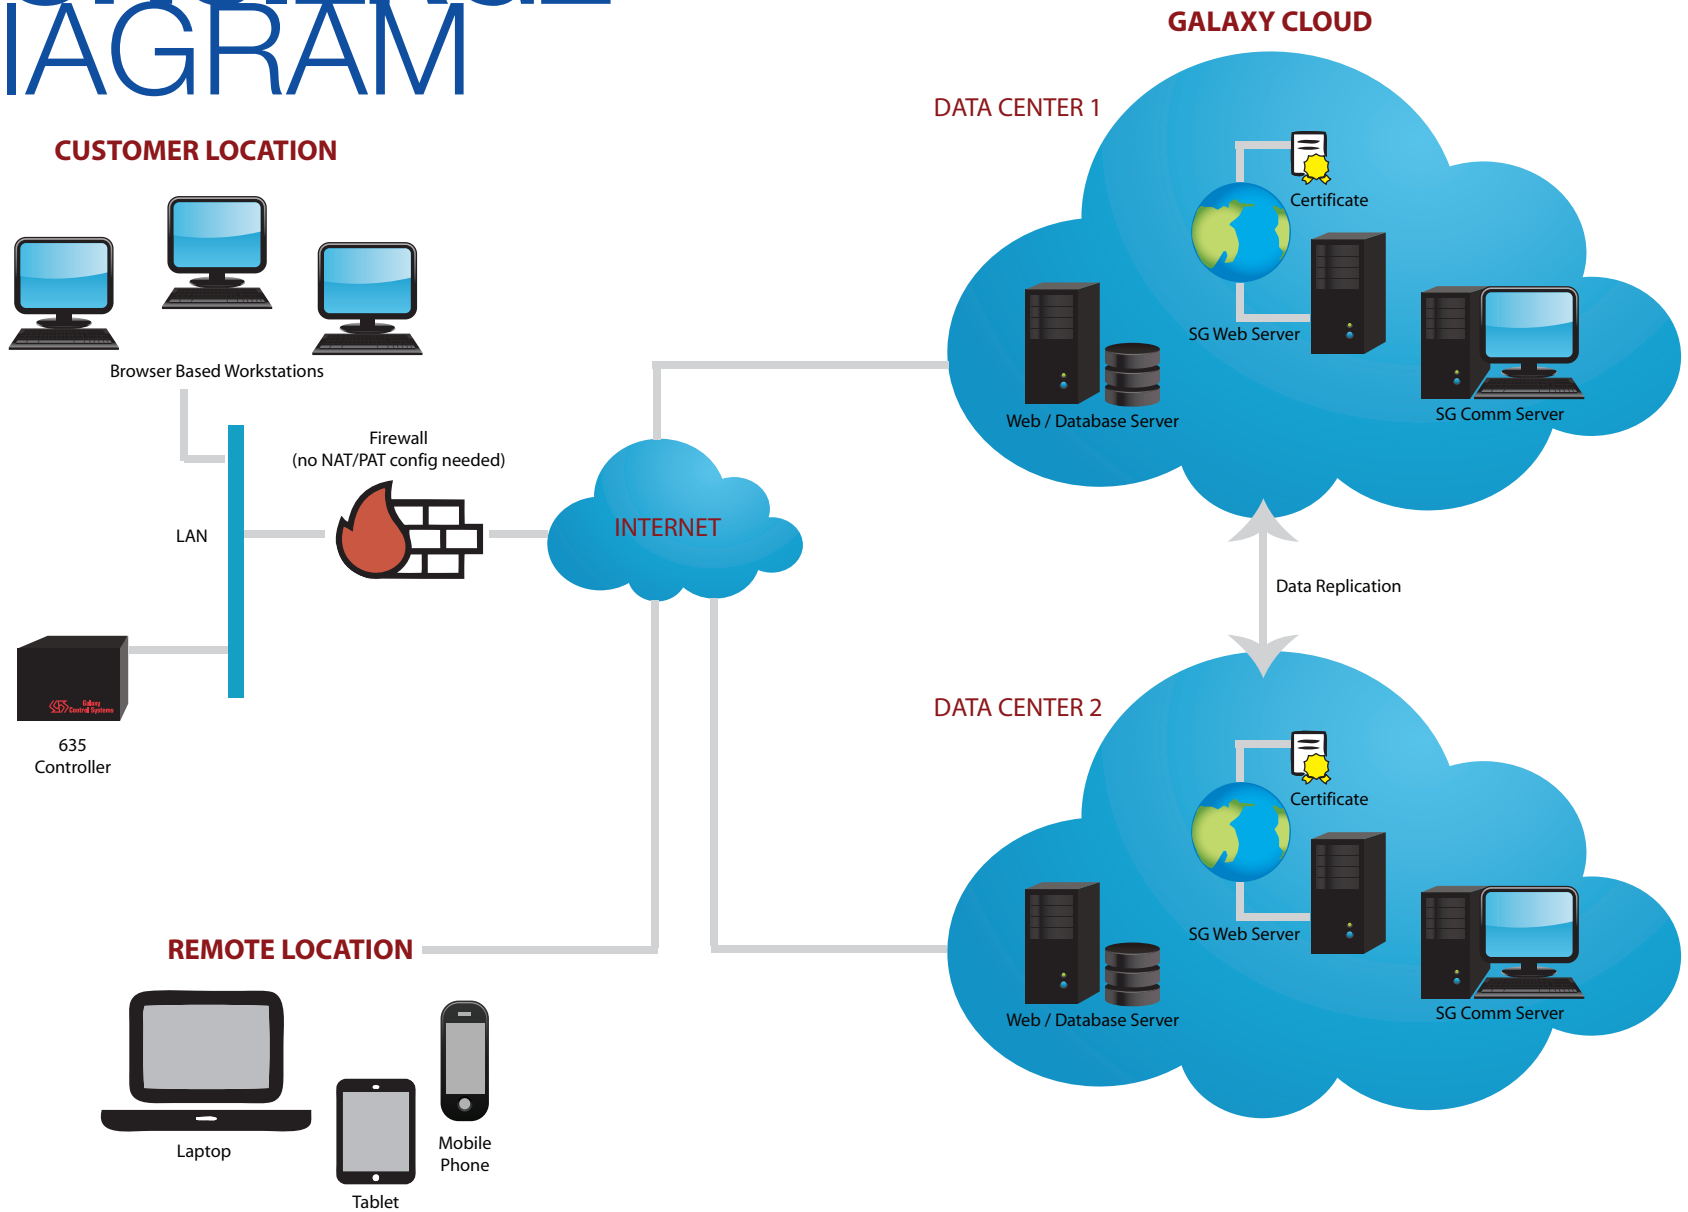

VIDEO MONITORING OVERVIEW

When you need the highest level of security, video monitoring by our staff is available. Having alarms being reported is one thing but having alarms with video provides the highest level of security. Our team can inspect video and see if a situation requires a site visit. This greatly reduces false alarms saving on time and resources. For those that require the greatest level of security available, LIVE video monitoring is offered. Instead of waiting for an event to happen, we can help prevent it by actively watching. If something looks suspicious, we can alert designated parties to address the situation.
